

DJ effects for Live shows. Version 1.0
Template for Traktor Pro 2.6.8 or later
MIDI controller: Tornado A1

- Applied effects are integrated into Traktor Pro.
- **To use Tornado A1 gloves** you need a laptop (Windows or Mac OS X) and audio interface.
- **Connection to the DJ deck:**

- **Placement, designation and functions of the buttons:**

- Power – switch gloves on
- B1 - B4 – effects on / off
- Preset - switching presets
- Sw1 (left) - minimize / maximize Tornado plug-in (for Mac OS X only)

- **Present switching modes.** Presets are switching using Preset button and depend on the Direction option:

Up – loading previous preset in the Preset Bank

Down - loading next preset in the Preset Bank

Manual - preset is selected using the buttons B1-B4 when Preset button is on. At the time of switch off Preset button the selected preset is loading. Switching between windows of Tornado plug-in (Keyboard / Preset Bank) is proceeding automatically.

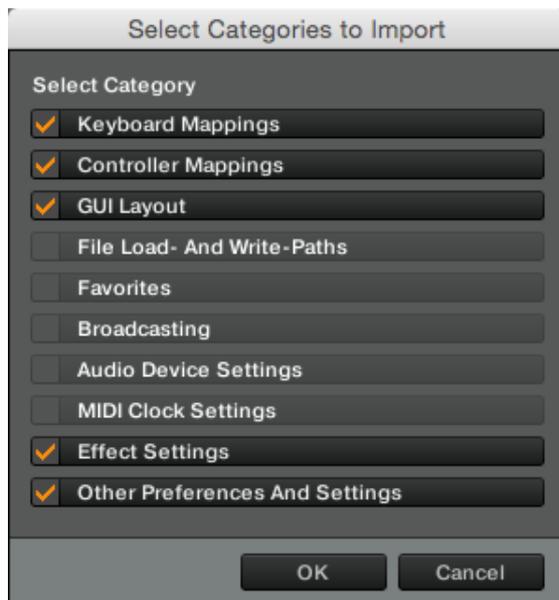

- **Managing Presets: Effects and Gestures.**

Preset managing is organized as follows. We have designed presets which contain 8 effects, 4 for each glove. As shown on pic (arrow 1), FX Unit 1-3 operate in Group mode, effects do not change. FX Unit 4 operates in Single mode (arrow 2), its effect is selected automatically when pressing the specific button on the glow and depends on selected preset. Arrow 3 points on sample (Sample 1 and Sample 2), they start by hand wave taking the selected preset. These samples can be chosen individually or use standard ones (they come together with presets).

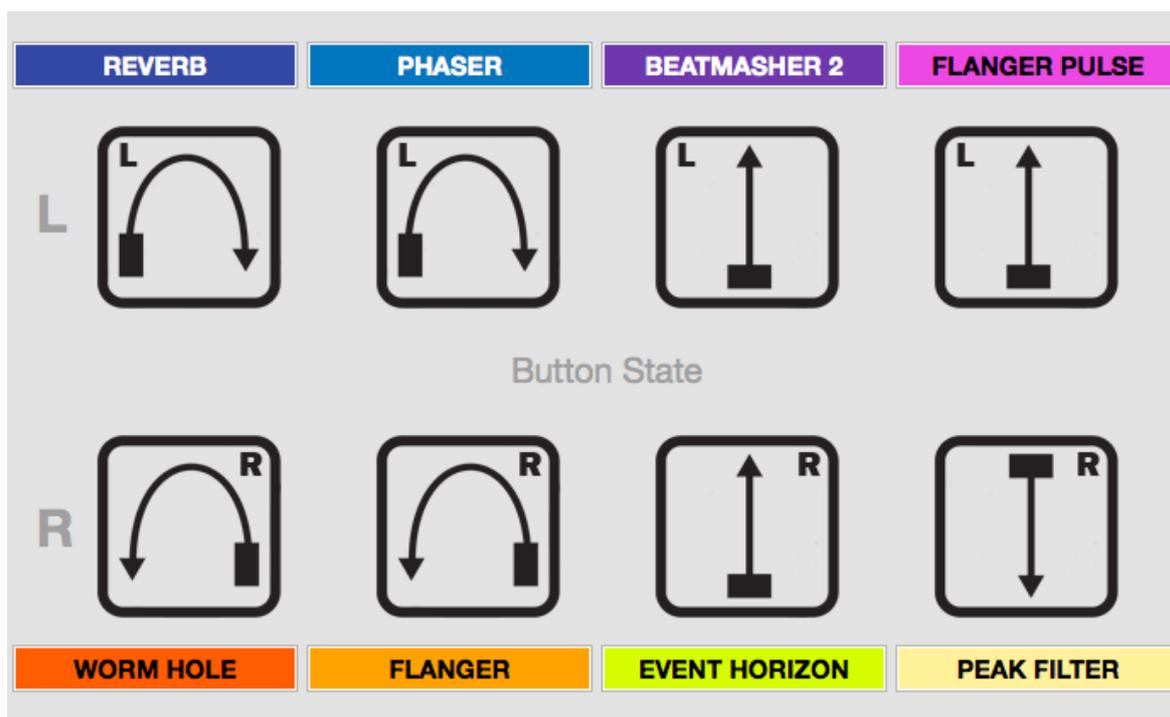

You can control **two different effects simultaneously** if they are assigned for **different gloves and different FX Unit**. Otherwise, you may face a conflict of gestures or FX Unit access, which is eliminated by switching off one of the effects. On the keyboard page gestures are shown that control corresponding effects. For convenience and easy usage we set up simple and clear gestures. At the same time gestures do not change when switching between presets, only effects are changing. You can customize gestures for each effect individually (see User Manual). Gestures which control the effects are displayed on the keyboard page of Tornado plug-in.

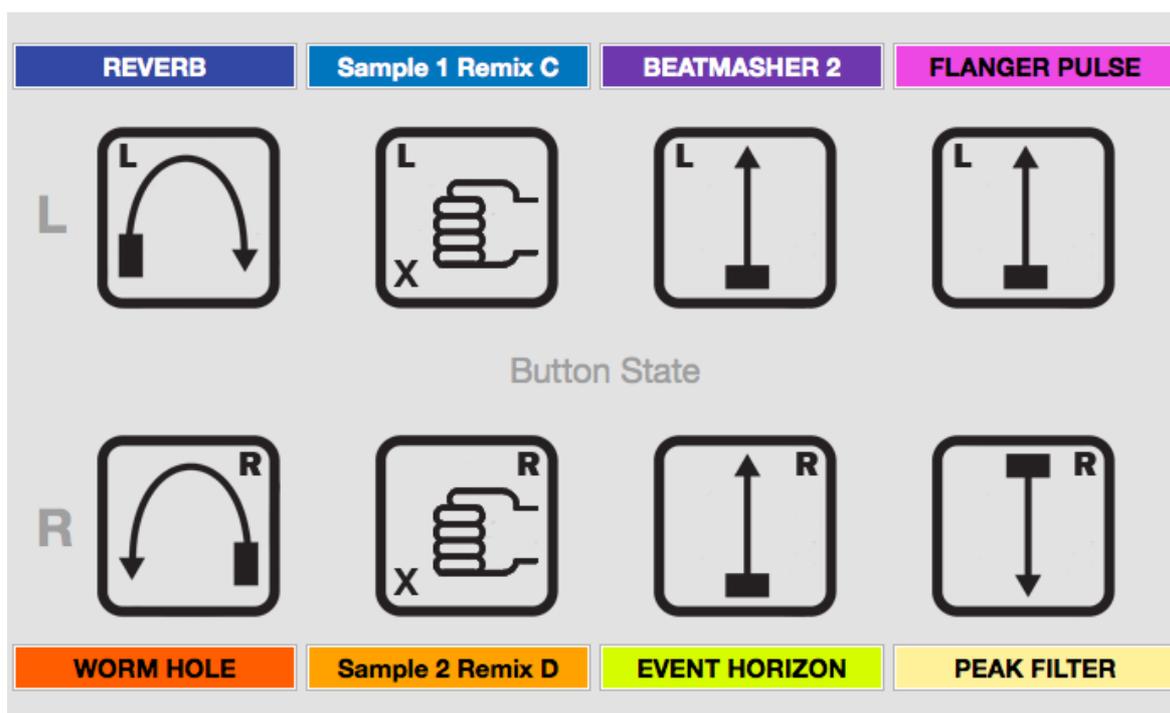

Import of settings. To connect Traktor Pro with MIDI controller Tornado 17 you need to import the configuration file - TornadoA1.tsi and set up MIDI input port on Tornado (see manual of article on our blog <http://en.global-dj.com/category/blog>)

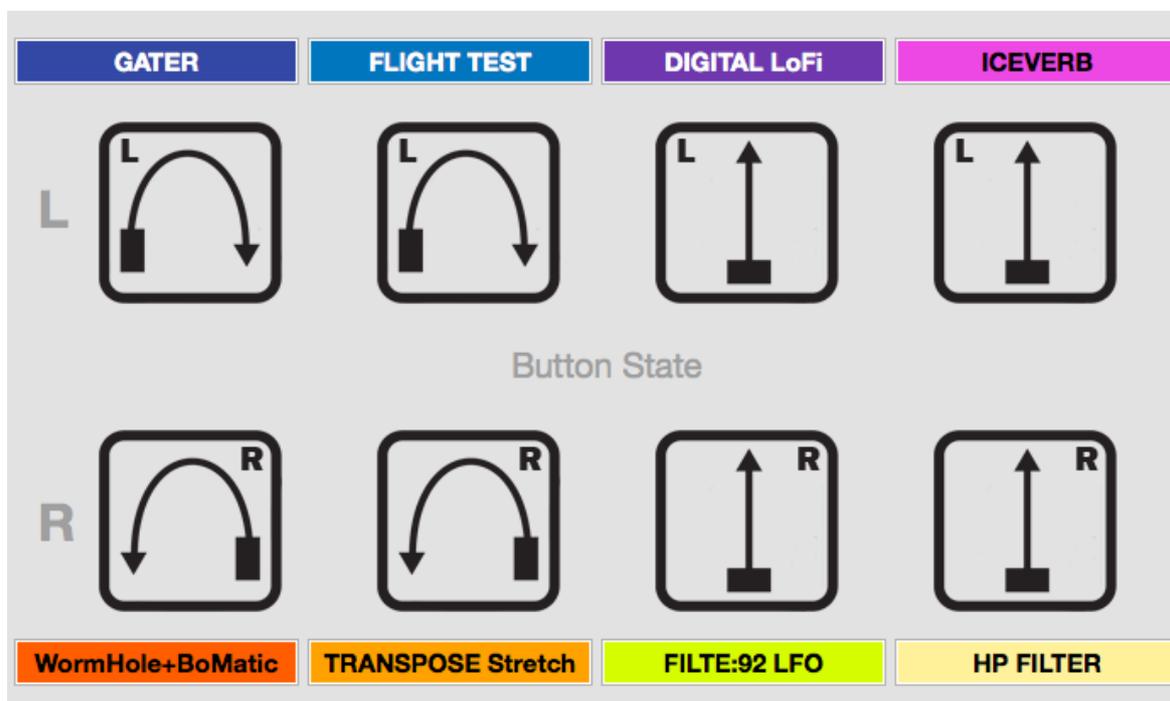

- Preset Traktor_FX1

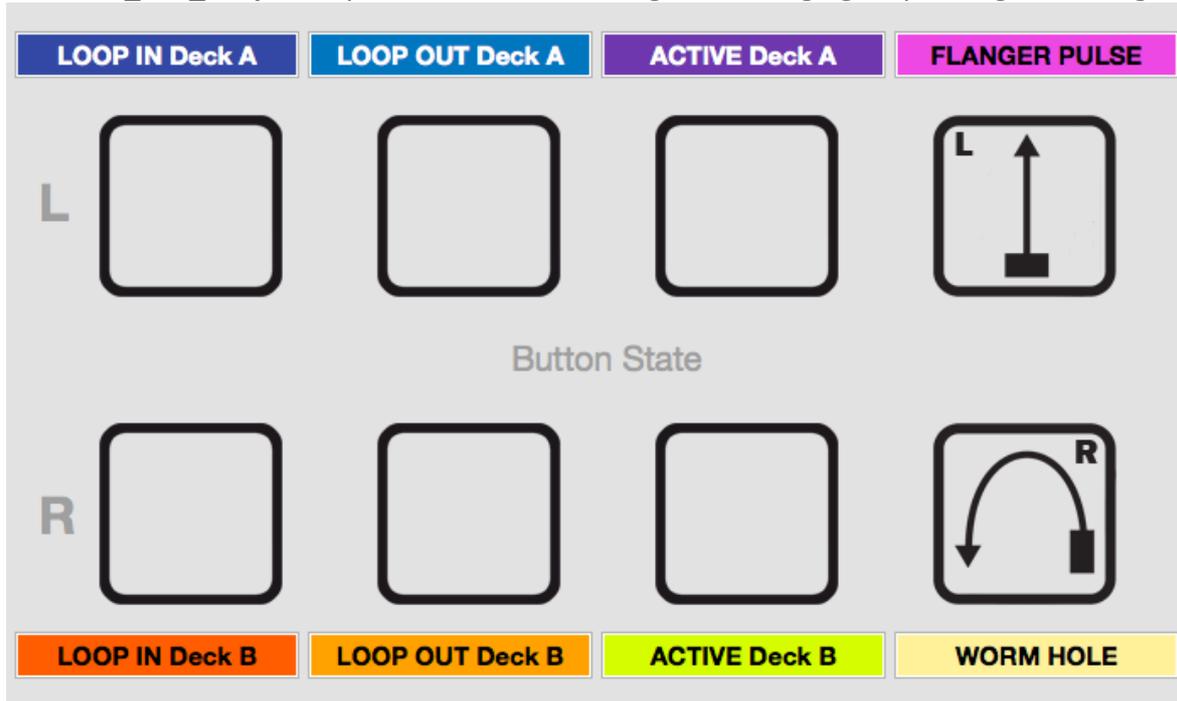

- **Preset Traktor_FX1_with_Sampler.** This preset use start of samples by hand wave. This mode is activated by B2 button on each glove.

- **Preset Traktor_FX2**

- **Preset Traktor_FX3_Loop.** This preset is set for creating and managing loops using Tornado gloves.

- Thanks. In case of any questions please read user manual for Tornado gloves or to support service on www.global-dj.com
